

# CANCARE

Name of Game: CanEat

1. Adult patients going to or undergoing cancer treatment.
2. Caregivers of patients undergoing cancer treatment.

Upon completion of game, patients and caregivers are able to better understand and manage nausea and/or vomiting as an side effect of anti-cancer treatment through anticipation, planning and preparation during daily life routine.

- Players can make choices to prevent or reduce nausea.
- Players can gather items to help with nausea and vomiting when going outdoors.
- When eating out, players can choose food that are well cooked and less oily to reduce sensation of nausea and risk of infection.
